

# Weekly Report

26/09/2016-30/09/2016

Han Dongming Sept. 30 2016

## Work

1. Debug the back-end data of the Hua Wei project.
2. Do the organization revolution of the Hua Wei project

## To do

1. Read paper
2. Do the Hua Wei project

## Feelings

In today's meeting, Dr. Mei and another doctor did two presentations, the first one is Dr. May's paper "cross-cutting" which talked about after adding some code for the existing

D3.js data, we can select or mark the graphics and other operations, I think the we can publish the processed data and D3 data to open to third-party developers, likes a platform, the user can directly add the small function coded by other developers.

The second one talked about Data visual analysis on a MOOC forum, there were five views to analyze five kinds tasks, there was few connection between the any two views of the five views. And it's hardly to know how to use the system and understand the functions of the five views for the first sight. I think we can do some personalized configuration at the beginning when users use a system, we can tell them every view's function and you can choose the color or the kind of chart for this vies, of course we would tell them which is the best one we think, the reasons and features world be written on every different configurations, let user make their choices.
